Directions: Solve each problem.

1) Tony biked $\frac{3}{4}$ miles on Monday and $1\frac{2}{4}$ miles on Tuesday. How many miles did he bike in all?

2) You ordered 3 pizzas to share with friends. If $1\frac{1}{6}$ pizzas were eaten, how much pizza is left?

3) Last week you had friends over and ordered 3 pizzas. After they were done eating, there was $\frac{3}{8}$ pizza left. How much pizza was eaten?
